

Student Education & Data Support

I’m Sandeep, an incoming MCS student at UIUC. I bring experience teaching large student groups, improving educational workflows, analyzing data, and coordinating student teams.

- Prepared for the Student Money Management Center’s mix of financial education, program analysis, and dependable operations.

HOW I WORK

Three strengths, working together

-  **Education** 01
- Explain ideas clearly
-  **Data** 02
- Find the useful signal
-  **Program support** 03
- Keep the work moving

LISTEN — **MEASURE** — **IMPROVE**

A FEW NUMBERS BEHIND THE WORK

21 MONTHS

supporting a virtual data course

14 DEPARTMENTS

coordinated at Paradox

1,500+ STUDENTS

supported in each course term

₹16M BUDGET

managed with accountability

1,000 DATASETS

checked in one grading workflow

5 TONS

of school materials distributed

I like the point where numbers become useful to people.

Good programs need more than good intentions. They need clear information, sensible workflows, and people who notice when something is not working.

My studies in programming, data science, and engineering taught me how to examine a problem carefully. Teaching at IIT Madras and leading Paradox taught me the other half: listen to people, explain things plainly, and follow through on the operational details.

As I begin the Master of Computer Science program at UIUC, I want to bring those habits to work that supports students—especially work involving educational resources, data-informed decisions, and financial well-being.

Master of Computer Science · 2026–2028

How my experience fits the SMMC role

Each part of the position connects to work I have already done in student education, course administration, analysis, or team leadership.

01

Financial education

Ran live sessions and answered Discourse questions for a course serving more than 1,500 students per term.

02

Educational materials

Prepared supporting resources, assessments, and new question formats around the needs of a large, varied student group.

03

Program analysis

Used assessment and submission patterns to find unclear communication, recurring errors, and gaps in educational processes.

04

Digital badge support

Improved online course workflows and administration—transferable experience for learning systems and digital badge operations.

05

Intern supervision

Mentored students and coordinated a 350-person student team, setting clear responsibilities and following work through.

Evidence for the work SMMC needs

These two roles show how I teach, improve educational processes, manage details, and support people at scale.

01

TEACHING ASSISTANT • IIT MADRAS

Helping a virtual data course run clearly and consistently

For 21 months, I worked between the faculty team, the course systems, and more than 1,500 students each term. The job was part teaching, part assessment design, and part making a large online course more reliable.

1,500+

students per term

1,000

unique assignment datasets

Minutes

evaluation time, down from hours

Teaching at scale

I ran live doubt-clearing sessions, followed student questions on Discourse, and prepared supporting material. The goal was simple: give students a patient, practical explanation when the first one did not click.

Better ways to assess learning

I contributed to assignments, quizzes, and exams, and researched new question formats. Several of those formats were used in course examinations, giving the team more ways to test applied understanding.

Faster, safer course operations

For an assignment with 1,000 unique datasets, I helped replace sequential checks with a cloud-based queue and parallel workers, bringing evaluation down from hours to minutes. I also traced a timing gap in remote-exam locking and added batch processing and verification checks so submissions closed consistently.

Keeping a large student festival accountable and on track

I grew from volunteer to Deputy Head, Secretary, and then Steering Committee member. Along the way, I helped a 350-person student team deliver more than 50 events while keeping budgets, vendors, approvals, and on-ground work connected.

350

students in the team network

14

departments

₹16M

operating budget

Responsibility that grew over time

As Deputy Head of Facilities, Requirements, and Budgeting, I led a 20-person team through vendor coordination and five days of festival logistics. As Secretary, the scope grew to 14 departments, financial oversight, resource planning, and shared deadlines.

Systems that made coordination easier

I oversaw the rollout of a student app for announcements and QR check-ins, the customization of an open-source team-management tool, and a new payment gateway. Together, they made approvals, tracking, and collections easier to follow.

A more direct route to schools

For School to School, I helped replace centralized storage with direct delivery to schools and orphanages. That change made it easier to coordinate volunteers and get five tons of academic material to the communities it was meant for.

SMMC ROLE FIT

The skills I would bring to the center

A focused mix of student education, communication analysis, digital program support, and team coordination.

01

Student education

Making unfamiliar information clear and approachable.

- Live and online education
- Educational material development
- Support for diverse learners
- Student mentorship

02

Communication analysis

Using program activity to improve how students are reached.

- Education effort analysis
- Communication review
- Analysis and reporting
- Clear findings for decisions

03

Program operations

Keeping people, systems, and delivery aligned.

- Digital learning workflows
- Budget accountability
- Intern and team supervision
- Project coordination

EVIDENCE OF APPLIED ANALYSIS

Turning a large dataset into useful findings

For the Karnataka State Police Datathon, I helped build a geospatial and time-series analysis tool that turned complex data into findings people could use. It is the same practical approach I would bring to SMMC's communication and education data.

LET'S CONNECT

Good student support starts with a clear conversation.

I'm applying specifically for the SMMC Support Specialist position. I would be glad to help the center create useful financial education, understand what is reaching students, support the Digital Badges Program, and guide student interns.
